## GENERAL INFORMATION

This manual contains information specific to vehicles manufactured by Winnebago Industries.

For information regarding the chassis of the vehicle, refer to the appropriate chassis manufacturer for service information.

Keep this manual available for ready reference. It will aid in providing quality care and service to the vehicle.

The paint codes listed in this manual are based upon the most recent information available at the time of publication. Winnebago Industries, Inc., reserves the right to make any changes without prior notice.

Winnebago Industries, Inc., reserves the right to make changes and to make additions to or improvement in its products without imposing any obligation upon itself to make such changes, improvements, or additions to products previously manufactured.

Winnebago may periodically publish service bulletins and manual revisions to either supplement or supersede information in the manual. It is your responsibility to read these updates and file them in the appropriate section of this manual.

**CAUTION:** To properly reduce the chance of personal injury and/or property damage, the following instructions must be carefully observed.

Proper service and repair are important to the safety of the service technician and the safe, reliable operation of all motor vehicles. If part replacement is necessary, the part must be replaced with one of the same part number or with an equivalent part. Do not use a replacement part of lesser quality.

The service procedures recommended and described in this manual are effective methods of performing service and repair. Some of these procedures require the use of tools specially designed for the purpose.

Accordingly, anyone who intends to use a replacement part, service procedure or tool, which is not recommended by the vehicle manufacturer, must first determine that neither his safety nor the safe operation of the vehicle will be jeopardized by the replacement part, service procedure, or tool selected.

It is important to note that this manual contains various "Cautions" and "Warnings" that must be carefully observed in order to reduce the risk of personal injury during service or repair, or the possibility that improper service or repair may damage the vehicle or render it unsafe. It is also important to understand that these "Cautions" and "Warnings" are not exhaustive, because it is impossible to warn of all the possible hazardous consequences that might result from failure to follow these instructions.

## Winnebago Industries Service Training Dupont® Paint Codes

These vehicles contain some parts dimensioned in the metric system as well as in the domestic system. Some fasteners are metric and are very close in dimension to familiar customary fasteners in the inch system. It is important to note that, during any vehicle maintenance procedures, replacement fasteners must have the same measurements and strength as those removed, whether metric or domestic. (Numbers on the heads of metric bolts and on surfaces of metric nuts indicate their strength. Domestic bolts use radial lines for this purpose, while most domestic nuts do not have strength markings.) Mismatched or incorrect fasteners can result in vehicle damage or malfunction, or possibly personal injury. Therefore, fasteners removed from the vehicle should be saved for reuse in the same location unless otherwise indicated. Where the fasteners are not satisfactory for reuse, care should be taken to select a replacement that matches the original.

Winnebago Industries, Inc.  
Forest City, Iowa 50436

If after consulting this manual you require further assistance, please contact the Winnebago Industries Service Department at:

## APPLICATION SPECIFICATIONS

Winnebago Industries produced vehicles, receiving standard factory applied automotive finishes, are painted with Dupont® Imron. The following equipment and specifications are used:

Spray Gun = Mattson HVLP

Air Cap = Mattson 7042

Tip = .050

Fluid Feed = 60-80 ml per 15 seconds

Air Pressure = 50 psi

SPRAY TECHNIQUES AFFECTING COLOR MATCH  
IN SINGLE STAGE METALLIC COLORS

<u>TECHNIQUE</u>	<u>TO LIGHTEN</u>	<u>TO DARKEN</u>
Air Pressure	Increase	Decrease
Film Build	Thin (assuming hiding)	Thick
Fluid Delivery	Decrease	Increase
Fluid Pressure	Decrease	Increase
Gun Distance	Increase	Decrease
Gun Speed	Increase	Decrease
Nozzle Size	Decrease	Increase
Number of Mist Coats	More (assuming flash)	Less (assuming flash)
Paint Temperature	Hot	Cold
Panel Angle	Vertical	Horizontal
Reduction	Increase	Decrease
Solvent Selection	Faster	Slower
Time Between Coats	Increase	Decrease
Viscosity	Thin	Thick

NOTE: The above chart is intended for use in determining light and dark variations. Perceived hue and chromatic variations area also possible, depending on the metallic color being sprayed.
