

Technical Bulletin

Subject: **Airbag System, Use of Stabilant 22A on Electrical Connections OK**

Group: **69**

Number: **95-03**

Model(s): **All with Airbag Systems**

m.y. **All**

Date: **Sept. 11, 1995**

Service

When following Airbag diagnostic procedures outlined in section 01 of the appropriate Repair Manual:

- Be sure to check wiring connections as outlined in the "Correction" column of the diagnostic troubleshooting procedures.
- When a procedure requires separation or replacement of a terminal, always apply contact enhancer, Stabilant 22A, Part No: **ZVW 186 001**, to the terminal. Refer to Technical Bulletin Group 97, number 95-03, dated Apr. 11, 1995.

Caution!

Part numbers are for reference only. Always check with your Parts Dept. for the latest parts information.

- After application of the contact enhancer reconnect all connections and retest the system.

When ever a harness replacement is necessary, Stabilant 22A should be applied to all terminals prior to connecting the harness.

To compensate for expense of the Stabilant 22A, add labor operation **97A1000 5 TU** to your warranty claim.

Caution!

Always disconnect the Battery Ground (GND) strap before working on the airbag or related system.
